

Vibration Welder Refurbishment Program

Did you know the average life expectancy of a piece of plastic processing equipment is 15-20 years?

How about extending that life another 10-15 years?

ADEPT Equipment Services understands the importance of keeping your capital equipment in efficient, functional, easy-to-maintain condition. **Let us bring your vibration welding equipment back to like-new condition.**

Equipment life expectancy is affected by three major factors:

- The OEM's refusal to offer support for their legacy equipment, preferring to sell new machines.
- Lack of equipment maintenance, items such as oil/filter changes, leak repair, general cleaning, and wear tolerances.
- Component obsolescence, whether actual or contrived, can make repairs difficult.

ADEPT's commitment to your continued success is why we have developed the best vibration welder refurbishment program in the industry.

- Our staff has over 30 years of experience in design, production, maintenance, and repair experience. We offer access to our knowledge and experience around the clock, and at your location, to support your production needs.
- Our refurbishment program is designed as the most affordable alternative to new equipment purchase. Our system of repair, retrofit, refurbish has all the flexibility to meet your specific needs while staying within your budget.
- We use off-the-shelf components that are easily replaceable by your technicians and supportable by your inventory control requirements.

From a basic controls retrofit to a complete machine disassembly and refurbishment, we upgrade your controls to the latest technologies, helping you:

- Secure new programs on a tight budget
- Increase efficiency, productivity, and reliability, resulting in less downtime
- Increase equipment life expectancy for many years
